

Assignment Name: Internet Explorer

Client-Server Architecture

Definition:

Client-server architecture is a computing model where the client (user device) sends requests to the server, and the server processes those requests and sends responses back.

Diagram:

Components:

1. Client: Browser or application used by users.
2. Server: Computer that stores and processes data.
3. Network: Internet connecting client and server.
4. Protocol: HTTP/HTTPS used for communication.

What Happens When You Open a Website?

Step 1: Enter URL

You type a website address in the browser.

Step 2: DNS Lookup

DNS converts the domain name into an IP address.

Step 3: Client Sends Request

The browser sends an HTTP/HTTPS request to the server.

Step 4: Server Processes Request

The server processes the request and retrieves data if needed.

Step 5: Server Sends Response

The server sends back the webpage files.

Step 6: Browser Renders Website

The browser displays the website on the screen.

Step 7: Additional Requests

The browser loads images, scripts, and other resources.

Flow Diagram:

User → Browser → DNS Server → Web Server → Database ↑ ↓
